DSC F 5.6 PROJECT MANAGEMENT

Time : 3 Hours

Max. Marks :75

Section – A

Answer any five of the following questions

(5 x 3 = 15 Marks)

1.
 - a. Project initiation
 - b. Project
 - c. PERT
 - d. Team work
 - e. Performance measurement
 - f. Project cost estimation
 - g. Project follow-up
 - h. Project execution cycle
 - i. Traditional methods of evaluation
 - j. Project control

Section – B

Answer any One question from each unit

(5 x 12 = 60)

UNIT – I

2. Describe the process of project identification.

OR

3. Explain the different phases of Project Management.

UNIT – II

4. Define project planning. Explain the steps involved in project planning.

OR

5. What is CPM? How is it useful in project control?

UNIT – III

6. Discuss the Project Termination. Explain the various reasons for the termination of a project.

OR

7. Define project execution. Explain the process of project execution.

UNIT – IV

8. What is project evaluation? Explain various types of project evaluation.

OR

9. What are the challenges or problems of Project evaluation?

UNIT - V

10. A car manufacturer has decided to make a significant investment into expanding its operation in South Africa by setting up a large assembly unit. The estimations are as follows

Initial investment is Rs. `6,00,000.

Forecast net income from the project is detailed below:

Year	Cash inflows (Rs `)
Year 1	1,40,000
Year 2	1,45,000
Year 3	1,55,000
Year 4	1,62,500
Year 5	1,48,000

- (i) Calculate the projected payback time for the project to the nearest month.

- (ii) Calculate the Net Present Value of the project using a discount factor of 5% and comment on the attractiveness of the project.

Discount factors at 10 % are;

Year 1 = 0.909, Year 2 = 0.826, Year 3 = 0.751, Year 4 = 0.683,
Year 5 = 0.62.

11. Think about it: Characteristics of a project involving the installation of a new server. The installation of a new server in an office is one example of a project. It involves a single, definable purpose, which is to set up a new server-based network for the office. It uses the skills of a number of different people, from individual company users to external specialist IT consultants. Different people will write the software, configure the hardware, install the system and test and commission it. As with many projects, the team itself is multidisciplinary. Installing the server and commissioning it is a unique process for the IT consultants, in that every office is different and the demands of any particular client will be specific to that client. The project will always be somewhat unfamiliar, because new hardware and software are coming onto the market all the time, and hence the resulting system requirements will be constantly changing. The project is highly interdependent, in that the input of each person in the multidisciplinary team must work properly in order for the overall new system to work. The installation team is also temporary. It works together on the server installation. As soon as the installation is complete and the system is commissioned, the team ceases to exist and each individual either moves onto new installation projects or moves back into their standard or normal functional roles. The installation may be interlinked, in that it may take place in conjunction with hardware or software upgrades. Most IT managers would take advantage of a server upgrade to carry out other network improvement works such as replacing PCs or upgrading software. The project is designed to bring about change in the form of a new server that presumably will make the company more efficient. The overall

level of change risk is high and some form of standby provision is obviously necessary. All obvious precautions such as backing up all data, running duplicate systems, phased commissioning and so on should be put in place to reduce the impact and magnitude of change risk.

Questions:

1. Where might the installation of a new server not be regarded as a project? How could project objectives (installation of the new server) be accurately coordinated with organisational objectives (general software and hardware upgrade)?

MODEL QUESTION PAPER

III B.Com., SEMESTER – V

DSC F 5.6 PROJECT MANAGEMENT

Time : 3 Hours

Max. Marks :75

Section – A

Answer any five of the following questions

(5x 3 = 15 Marks)

1.
 - a. Project initiation
 - b. Project
 - c. PERT
 - d. Team work
 - e. Performance measurement
 - f. Project cost estimation
 - g. Project follow-up
 - h. Project execution cycle
 - i. Traditional methods of evaluation
 - j. Project control

Section – B

Answer any One question from each unit

(5 x 12 = 60)

UNIT – I

2. Describe the process of project identification.

OR

3. Explain the different phases of Project Management.

UNIT – II

4. Define project planning. Explain the steps involved in project planning.

OR

5. What is CPM? How is it useful in project control?

UNIT – III

6. Discuss the Project Termination. Explain the various reasons for the termination of a project.

OR

7. Define project execution. Explain the process of project execution.

UNIT – IV

8. What is project evaluation? Explain various types of project evaluation.

OR

9. What are the challenges or problems of Project evaluation?

UNIT - V

10. A car manufacturer has decided to make a significant investment into expanding its operation in South Africa by setting up a large assembly unit. The estimations are as follows

Initial investment is Rs. `6,00,000.

Forecast net income from the project is detailed below:

Year	Cash inflows (Rs `)
Year 1	1,40,000
Year 2	1,45,000
Year 3	1,55,000
Year 4	1,62,500
Year 5	1,48,000

- (ix) Calculate the projected payback time for the project to the nearest month.

- (x) Calculate the Net Present Value of the project using a discount factor of 5% and comment on the attractiveness of the project.

Discount factors at 10 % are;

Year 1 = 0.909, Year 2 = 0.826, Year 3 = 0.751, Year 4 = 0.683,
Year 5 = 0.62.

15. Think about it: Characteristics of a project involving the installation of a new server. The installation of a new server in an office is one example of a project. It involves a single, definable purpose, which is to set up a new server-based network for the office. It uses the skills of a number of different people, from individual company users to external specialist IT consultants. Different people will write the software, configure the hardware, install the system and test and commission it. As with many projects, the team itself is multidisciplinary. Installing the server and commissioning it is a unique process for the IT consultants, in that every office is different and the demands of any particular client will be specific to that client. The project will always be somewhat unfamiliar, because new hardware and software are coming onto the market all the time, and hence the resulting system requirements will be constantly changing. The project is highly interdependent, in that the input of each person in the multidisciplinary team must work properly in order for the overall new system to work. The installation team is also temporary. It works together on the server installation. As soon as the installation is complete and the system is commissioned, the team ceases to exist and each individual either moves onto new installation projects or moves back into their standard or normal functional roles. The installation may be interlinked, in that it may take place in conjunction with hardware or software upgrades. Most IT managers would take advantage of a server upgrade to carry out other network improvement works such as replacing PCs or upgrading software. The project is designed to bring about change in the form of a new server that presumably will make the company more efficient. The overall

level of change risk is high and some form of standby provision is obviously necessary. All obvious precautions such as backing up all data, running duplicate systems, phased commissioning and so on should be put in place to reduce the impact and magnitude of change risk.

Questions:

5. Where might the installation of a new server not be regarded as a project? How could project objectives (installation of the new server) be accurately coordinated with organisational objectives (general software and hardware upgrade)?
